

POTTERS ARE LEADING SUPPLIERS OF POULTRY EQUIPMENT

OPEN AVIARY

SYSTEM DESIGN

- proven and engineered to last
- replicates tree - natural for bird behaviour
- no need for birds to come out of the system to go up / down
- birds like to sleep, eat, drink, lay – designed to match this
- adaptable to suit any building, refurbs or conversions + use of existing nests

CENTRE CANTILEVER LEG

- very little fixed to the floor = cleaning easier - other systems typically have legs every 5 feet
- can use offset bucket arm to clean out with machine
- simple and robust construction
 - heavier gauge steel = longer life
 - U channels – facing out - designed for easier leaning & control of insects

LOW & OPEN

- all birds can be seen and managed from ground level
- no need to climb on the system on daily basis – important for H&S
- can see right through from litter to nest (unlike tower systems)
- easy to ventilate and maintain good litter (no need for positive pressure system)

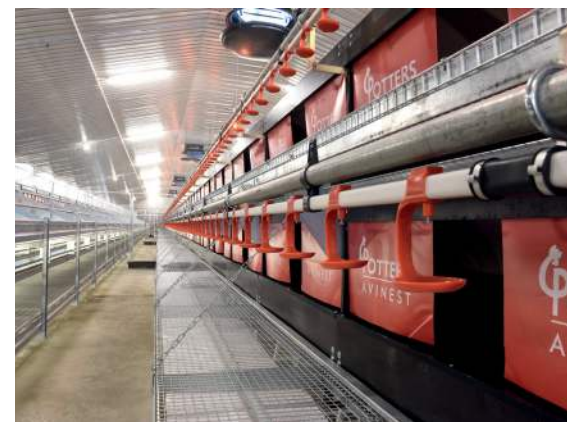

STRESS FREE MOVEMENT

- birds can move easily throughout the system
- multiple points of access – reduces congestion & assists with early training
- use ramps and hop between levels – minimises leg & keel bone injuries
- easy access to nests – reduces potential for mislaid eggs
- reduced stress = better feather wear, reduced mortality, improved productivity

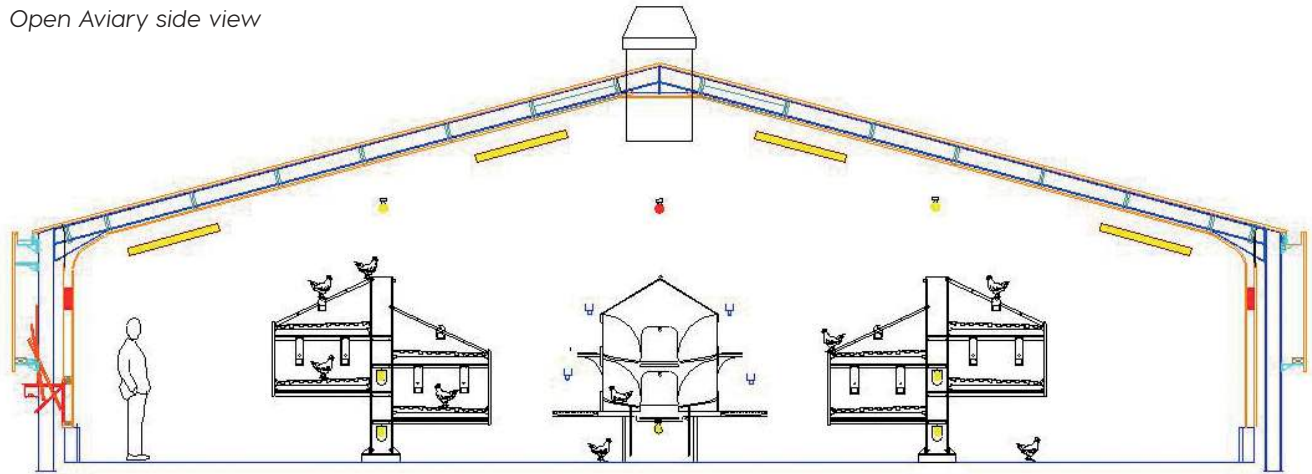

NARROW MUCK BELT

WIDTH – 3'11"

- easy to reach under and manage floor area
- easier to maintain and track on longer shed lengths

Open Aviary side view

NEST BOXES

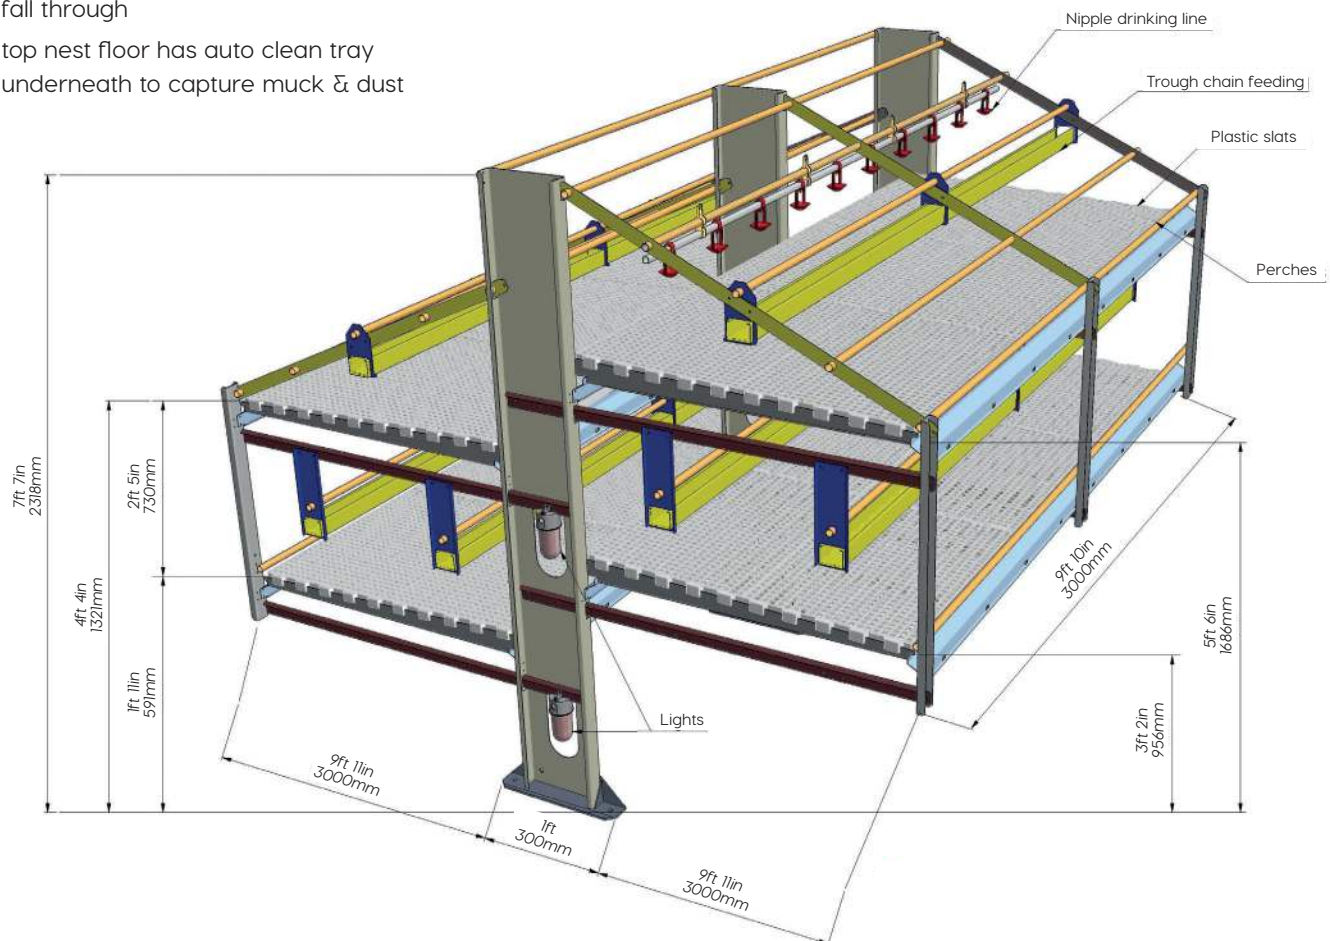

- accessible from both tiers of system – even distribution of eggs
- improves egg quality and reduces damage & smothers
- 0.7" marine ply + phenolic faced coating – engineered to last
- minimal temperature changes & reduced noise compared with metal nests
- original AstroTurf (3 yr warranty) – perforated to allow muck & dust to fall through
- top nest floor has auto clean tray underneath to capture muck & dust

EGG BELT

- one large egg belt with heavy duty drives
- only one transfer point minimising egg seconds
- dished and supported longitudinally to minimise damaged eggs

LIGHTING

- every 4'11" underneath the system – keeps birds active & reduces floor eggs
- LED bulbs – all dimmable & interchangeable throughout system

POTTERS POULTRY IS A FAMILY BUSINESS WHICH IS NOW
ON ITS 3RD GENERATION AND IT HAS SUPPLIED POULTRY
EQUIPMENT FOR WELL OVER 50 YEARS.
